Name of the Project *****

Consensia

One paragraph description of the project *****

Our project allows users to create multiple AI personas with different software-engineering and business roles — such as CTO, Software Architect, Senior developer, QA, SRE, Security Engineer, as well as Product Manager, Finance/CFO, and operations/Management. Each agent answers a technical or strategic question; a judge LLM analyzes all outputs and scores them for *consistency, fairness, and reasoning clarity*. The judge's consensus is then validated against human-tagged data.
